

ANIMAL SPONSORSHIP PLEDGE

We thank you for your interest in supporting our work for the animals and society of Brunei. Care & Actions for Strays (CAS) engages in various programmes to achieve our vision of a humane stray free, safer society and welcome your generous support in any way. We sincerely believe that together, we can make a difference for Brunei. For further information : care.actionsforstrays@gmail.com

The Stray Animal Problem In Brunei

Stray animals are a **direct** result of dumped, unsterilized pets and unwanted offsprings. Whatever the reason for dumping, abandoned animals only add to the already high number of stray animals on the streets of Brunei.

Why Not Mass Culling Of Strays To Manage Stray Population

All over the world, strays have been killed for decades. In countries with exposed garbage, the existence of strays is encouraged and mass culling of stray animals has proven ineffective in controlling stray populations. When strays are removed by mass culling, the territory becomes vacant and strays from neighbouring areas move in as there is available space and food source. This new population will have better breeding conditions with more room and food thus in no time at all, those animals that were mass culled only recently, will be replaced by a new population of strays. Any animal removed is easily replaced as by nature, such animals have high breeding rates, up to three times a year for dogs and four times a year for cats mostly with multiple births.

Further, those animals who escape the culling squads will engage in fights in an attempt to protect their territories when new strays move into the available territories and such fights may increase the chances of humans being bitten accidentally during these fights.

Why Sterilisation Programmes And How It Helps The Brunei Society

Methods used to kill / cull stray animals can include electrocution, poisoning and clubbing - all of which are inhumane, painful deaths. We hope that in Brunei, dog culling will be replaced by mass sterilisation and responsible pet ownership. Under this programme, strays are sterilised, replaced in their original area and since the territories are not vacated, new animals don't enter and over time, the dogs die naturally and the numbers dwindle. Sterilised animals are also less aggressive less prone to fighting as the need to fight for mating rights is no longer present. This decreases meaningless dog fights, less unwanted offsprings and more peace to humans living in the areas. Strays are allowed to live out their lives naturally with their population under control and are less of a nuisance to the public.

Sterilised strays are also generally more healthy and less susceptible to diseases thus the strays become stable, non-breeding, non-aggressive and disease-free, and gradually decreases over time. Where volunteers are available, sterilised strays are also fed, bathed and given basic medical care to reduce transmission of infectious diseases.

Your contribution will go a long way not only towards helping the animals but also the Brunei society, making it a stray free and safer society. Every little effort counts.

Sponsor Details	Full Name : _____ Email Address : _____ Tel No : _____
	Home Add : _____ Signature : _____ <i>(for e-submission, type name above)</i>

Sponsorship Options	Monthly Sponsorships	Amt B\$	Pls Tick	One Off Contributions	Amount B\$
		One female sterilisation - dog*	\$ 180.00		Towards sterilisation of dogs
	One female sterilisation - cat*	\$ 90.00		Towards sterilisation of cats	
	Foster care of one dog (per month)	\$ 50.00		Towards medical treatment	
	Foster care of one cat (per month)	\$ 35.00		Towards food for strays	
	Medical costs for strays	\$ 30.00		Towards foster care of dogs	
	Medical costs for strays	\$ 50.00		Towards foster care of cats	
	Medical costs for strays	\$ 100.00		Towards general needs	
	Medical costs for strays	\$ 200.00		Towards specific projects	
	Medical costs for strays (other amts)			Project Name :	
	General Needs (please fill in amount)				

* Limited funding allows us to target females only
